

## Loadmaster - Version issue problem

The same issue may apply to Sameday Express.

This indicates that the version on the computer is not the same as the reference version on the web site. It can occur after someone downloads the latest version of the website and replaces one loaded through Autoloaders.

The answer is also on the website in Downloads/Autoloaders.

Note : If you have previously used the network version of the loader before then you will need to delete the file WDUPDATE.NET which tells the program where to look for updates. Depending on your Windows version this may be in the program directory or in the hidden folder Program\_Data. You only need delete this the once as it will be recreated for the internet autoloader, there will be no need to do it a second time.

So simply manually delete the file WDUPDATE.NET and the message will go away.
