

## Loadmaster - using UK Postcode Addressing

By default Loadmaster is capable of using a limited form of Postcode Addressing using functions within Google and Bing. These go down to area level.

If you use PostcodeAnywhere (or have access to it) then you can use this to go down to the individual house.

Go into SETUP then GLOBAL PARAMETERS and choose the PAF.

Put a tick in Use Postcode Anywhere.

Enter your username and password.

If you are using the service direct from PostcodeAnywhere then leave the PCA site blank.

If you are using a hosted system, such as TPN then you will need to enter a value on this field -

XXXXX\PostcodeAnywhere

Where XXXXX is the IP address of the PostcodeAnywhere server.
